Azure PTU Batch Accelerator

01 / Asynchronous job flow — official OpenAI SDK, existing Azure OpenAI PTUs

BLUE SDK / inference · PURPLE asynchronous work · TEAL data access

SDK contract

JSONL input · unique custom_id
Chat Completions + stateless Responses

Customer controls submission time

No off-peak scheduler or utilization controller
Existing PTU capacity must be configured and available

Durable outcomes

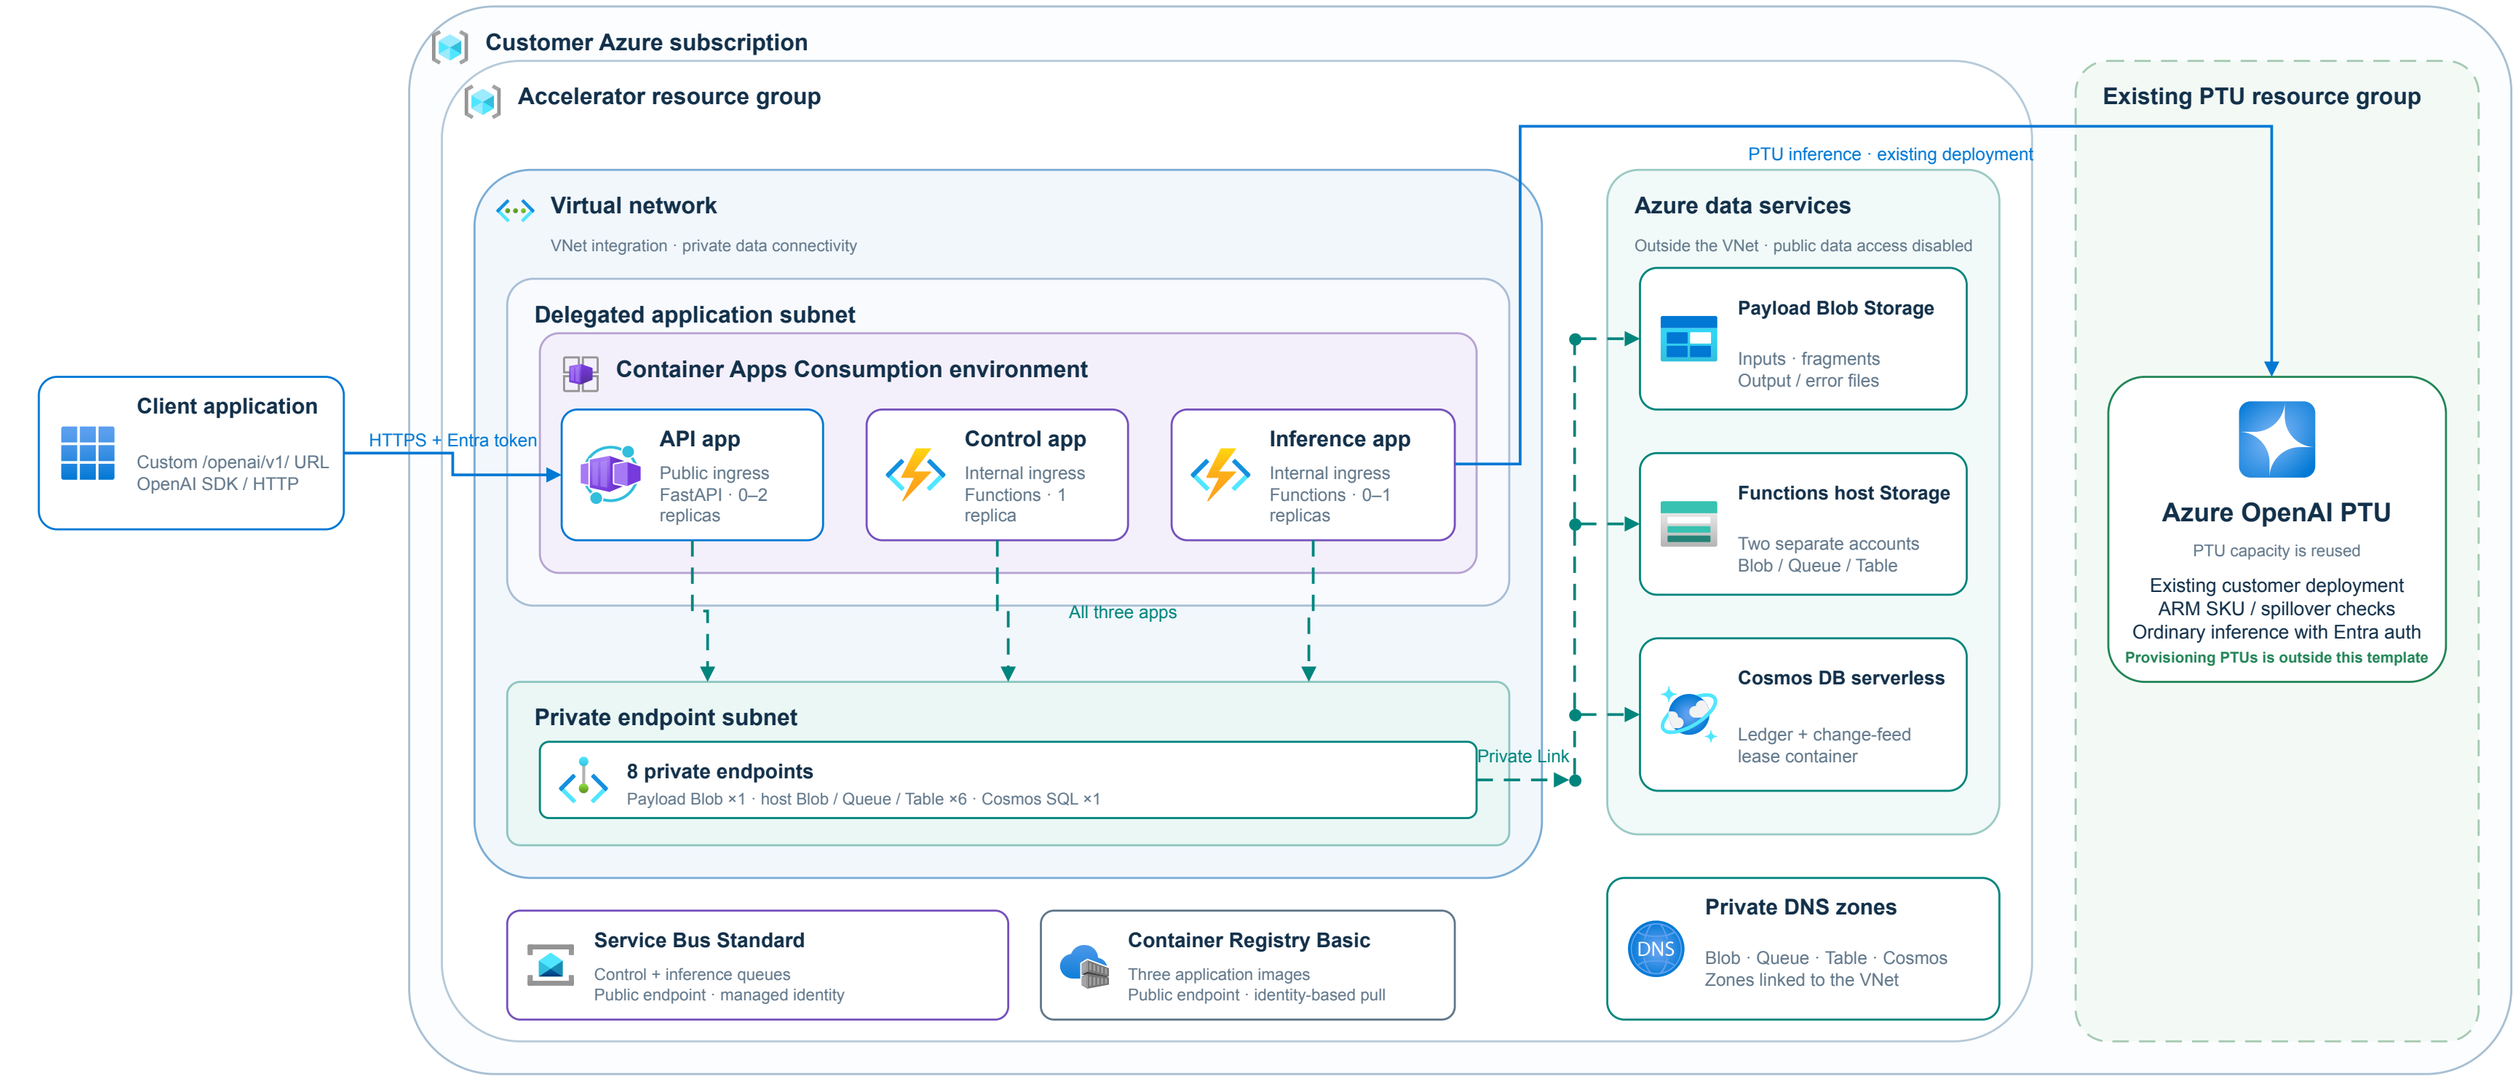

One published outcome per request
Unknown remote outcomes are not replayed by default

Reference architecture · Azure-native Files and Batch compatibility · Azure icons supplied by the user

Azure PTU Batch Accelerator

02 / Deployment and security — native Terraform private-networking topology

BLUE SDK / inference · PURPLE asynchronous work · TEAL data access

Microsoft Entra ID

API token audience + delegated scope / app role
Files and jobs remain isolated by caller

One user-assigned managed identity

Attached to all three apps · scoped service RBAC
No storage keys or registry admin credentials

Monitoring and operations

Application Insights + Log Analytics
Control recovery timer · guarded worker upgrades

Reference architecture · Azure-native Files and Batch compatibility · Azure icons supplied by the user
